

Content Optimization

Objective

Review campaign performance and identify opportunities to improve under performing content.

Optimization Actions

Product Posts

Observation: Some product posts received lower engagement than educational content.

Improvement:

- Add storytelling captions instead of product-only descriptions.
- Include customer benefits rather than listing product features.
- Use stronger call-to-action phrases such as:
"Which colour would you choose?"
"Tag someone who would love this!"
"Would you gift this to a friend?"

Reels

Observation:

Process-based videos attracted higher reach than static product showcases.

Improvement:

- Use stronger opening hooks.
- Keep videos under 20 seconds.
- Add trending audio where appropriate.
- Include captions for better accessibility.

Stories

Observation:

Interactive stories generated more responses than announcement-only stories.

Improvement:

Increase the use of:

- Poll stickers
- Question boxes
- This-or-That activities
- Countdown stickers for product launches
